

Composica Enterprise is a web-based e-learning authoring system that offers real-time collaboration among team members and provides a powerful programming-free, WYSIWYG environment to create high-quality, interactive e-learning content.

Features

- ◆ Rich, web-based, WYSIWYG authoring environment.
- ◆ Groupware authoring with task-management.
- ◆ Entirely programming-free.
- ◆ Unique fast-editing approach.
- ◆ Variety of interactive features such as Drag & Drop questions, Hot Spots, etc.
- ◆ Exciting visual effects.
- ◆ Dynamic navigation elements.
- ◆ Powerful assessment capabilities.
- ◆ Instant preview.
- ◆ Full SCORM conformance.
- ◆ Publish anywhere - LMS/ online/ offline/ CD.

Create

sophisticated interactive e-learning content.

Collaborate

between team members.

Composica Enterprise is a robust e-learning authoring system that brings new meaning to the term teamwork. With its powerful web-based, WYSIWYG authoring environment, no programming is needed to create amazing interactive e-learning content.

Authors, designers, subject matter experts and reviewers collaborate using a sophisticated groupware authoring environment with tasks management and page-level lock-out control, granting live overview of progress throughout the development process.

Its combination of reusable learning objects and improved collaboration between team members significantly shortens development time.

Robust authoring environment

Composica Enterprise offers full control over the way elements appear and behave. Authors are *never* limited to a set of predefined templates or styles.

Every element on the screen can be visually customised using a responsive properties grid that has the ability to control any detail of the element's appearance and behaviour. Each change in the properties grid is immediately inflicted upon the selected object(s), eliminating the need for complex dialogs and highly improving the speed of development.

Such elements also include sophisticated interactive objects, such as Drag & Drop questions, Hot Spots, Fill-in the blank and many others.

Reusable learning objects and layers

Composica Enterprise's object oriented approach provides unprecedented control over the efficient reusability of content and its logic. It separates the content, its appearance and its behaviour. The look and feel of each course can be swapped out even after the content has been organised because the system keeps styles, navigation rules, and persistent graphics in distinct layers and objects, which are separate from the learning content.

- ◆ Multiple layer control.
- ◆ Reusable assets, themes, learning objects, and widgets.
- ◆ Comprehensive inheritance - "build once" approach.

Sophisticated assessments

Assessment creation is easy yet powerful. Every interactive assessment feature imagined can be easily implemented using simple objects and widgets with no programming or scripting. Compositica Enterprise supports single or multi chapter tests with predetermined or randomly assigned questions and includes a sophisticated grading mechanism that allows assignment of different weights per chapter or question.

- ◆ Questions repository supporting dynamic and self adapting questions.
- ◆ Immediate test result calculation and presentation.
- ◆ Immediate feedback per question or a feedback summary at the end of the test.
- ◆ Optionally allows reviewing and retaking the test when the student fails.

Effective collaboration

Building e-learning content can finally be a truly collaborative experience. Authors, designers, subject matter experts and reviewers collaborate using a sophisticated groupware authoring environment. Individual team members work through a browser interface to author content stored in a central location. The system manages development tasks for each team member, while allowing real-time supervision. Its objects and layers control makes sharing and reusing content even more powerful, allowing authors to work on the content, while designers can simultaneously work on the overall course appearance.

- ◆ Web-based real-time collaboration.
- ◆ Page level lock-out control.
- ◆ Centralised objects repository.
- ◆ Built-in task management.

LMS integration

Compositica Enterprise seamlessly integrates with standard Learning Management Systems (LMSs) as it is fully SCORM compliant. Performance data down to the test item analysis level is captured and passed on to the LMS for management and reporting purposes. A metadata editor allows for the creation of extended course related metadata which an LMS can use to better categorise and distribute the content.

- ◆ SCORM compliant.
- ◆ Extended meta-data creation.

Summary

Compositica Enterprise empowers organisations by enabling the creation of compelling and highly interactive e-learning content. It revolutionises the way in which content is created and managed by allowing real-time collaboration and providing rich development features without the need for programming.

Unlike traditional authoring tools, Compositica introduces a new groupware-platform approach to the authoring process. The entire course development process is managed in a centralised workgroup environment.

Compositica's development team brings a wealth of experience specialising in various fields of e-learning, rich internet applications and enterprise solutions.

Among its customers are leading fortune 100 companies, educational organisations, government agencies and high-tech industry companies.
